Research Article Vol. X, No. X / April 2016 / Optica 1

Legacy LATEX template for preparing an article for submission to *Optica*

FRANCESCA VENTURINI^{1,2,*}, UMBERTO MICHELUCCI², AND MICHAEL BAUMGARTNER¹

¹ Institute of Applied Mathematics and Physics, Zurich University of Applied Sciences, Technikumstrasse 9, 8401 Winterthur, Switzerland

Compiled December 29, 2019

This legacy LATEX template can be used to prepare a research article or a short article for submission to Optica. Select \setboolean{shortarticle}{false} for a research article or \setboolean{shortarticle}{true} for a letter or memorandum. Select \setboolean{minireview}{true} to output a header identifying the paper as a Mini-Review. Authors may use this legacy template for a precise length estimate for Optica letters and memoranda. Please note that OSA is no longer using OCIS codes. © 2019 Optical Society of America under the terms of the OSA Open Access Publishing Agreement

1. INTRODUCTION

This legacy template is designed to assist with creating a two-column research article or letter to submit to *Optica*. See the OSA's Style Guide and Manuscript Templates pages for more details.

If you have a question while using this template on Overleaf, please use the help menu ("?") on the top bar to search for help or ask us a question using the option in the lower right of the editor.

2. METHODS

The sections below show examples of different article components. Sections should generally follow the conventional order: Introduction, Method, Results, Discussion, and Conclusion. Please do not include Methods in a separate section at the end.

3. RESULTS

A. Figures and Tables

Figure 2 shows an example figure.

B. Sample Table

Table 1 shows an example table.

Table 1. Shape Functions for Quadratic Line Elements

$\{N\}_m$	$\{\Phi_i\}_m \ (i=x,y,z)$
$L_1(2L_1-1)$	Φ_{i1}
$L_2(2L_2-1)$	Φ_{i2}
$L_3 = 4L_1L_2$	Φ_{i3}
	$L_1(2L_1 - 1)$ $L_2(2L_2 - 1)$

4. RESULTS

Let $X_1, X_2, ..., X_n$ be a sequence of independent and identically distributed random variables with $E[X_i] = \mu$ and $Var[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_{i=1}^{n} X_i$$
 (1)

denote their mean. Then as n approaches infinity, the random variables $\sqrt{n}(S_n - \mu)$ converge in distribution to a normal $\mathcal{N}(0, \sigma^2)$.

5. CONCLUSIONS

DISCLOSURES

Disclosures. The authors declare no conflicts of interest.

SUPPLEMENTAL DOCUMENTS

Optica authors may include supplemental documents with the primary manuscript. For details, see Supplementary Materials in Optica. To reference the supplementary document, the statement "See Supplement 1 for supporting content." should appear at the bottom of the manuscript (above the references).

REFERENCES

For references, you may add citations manually or use BibTeX. E.g. [1].

Letter submissions to *Optica* require two sets of references: an abbreviated reference style for publication and a full reference list to aid the editor and reviewers. Citations to journal articles in the abbreviated list should omit the article title and final page number; this abbreviated reference style is produced automatically when the \setboolean{shortarticle}{true} option is selected in the template, if you are using a .bib file for your references.

The full reference list meant to aid the editor and reviewers must be included as well on an informational page that will not count against page length; again this will be produced automatically if you are using a .bib file and have the \setboolean{shortarticle}{true} option selected.
